RAD Model with Axure RP

AIM

To design and develop an interactive user interface for a skill tracking application using the Rapid Application Development (RAD) model and Axure RP tool.

INTRODUCTION

Rapid Application Development (RAD) is a software development methodology that focuses on quick design and prototyping with continuous user feedback. It emphasizes faster development cycles and iterative improvements.

In this experiment, a skill tracking application named **SkillBoost** is designed. The application helps users monitor their skills and track their progress. The UI is developed using Axure RP, focusing on usability, visual design, and smooth navigation between screens.

OBJECTIVE

- To understand the RAD model phases
- To design user interface screens using Axure RP
- To implement navigation using interactions
- To create an interactive prototype without coding

REQUIREMENTS

- Axure RP software
- Computer system
- Basic knowledge of UI design

PROCEDURE

🔹 Step 1: Requirements Planning

The main features of the application were identified, including login, dashboard, skill tracking, and navigation between screens.

🔹 Step 2: User Design

The following screens were designed:

- Welcome Screen
- Login Screen
- Dashboard
- Skill Details Page

Each screen was created using UI elements such as text, buttons, rectangles, and icons. A gradient background and modern layout were used to enhance visual appearance.

🔹 Step 3: Construction

Interactions were added using Axure RP:

- “Get Started” button → navigates to Login page
- “Login” button → navigates to Dashboard
- Skill bars → navigate to Skill Details page

The prototype was tested using the preview option, and necessary adjustments were made.

🔹 Step 4: Cutover

The final UI design was completed and verified. The prototype is ready for demonstration and can be exported as HTML for further development.

RESULT

The SkillBoost UI prototype was successfully developed with multiple screens and interactive navigation. The application demonstrates a smooth user flow and an effective UI design using the RAD model.

CONCLUSION

This experiment helped in understanding the RAD model and its application in UI design. Using Axure RP, an interactive prototype was created efficiently without coding. The process improved knowledge of UI/UX design and user interaction flow.
